Dramatic Realism

The Avalon's intricately detailed log stack, 5 log scraps, ember chips, and cascading ember bed burner are painstakingly recreated from an actual wood fire. Despite its completely random appearance, the log set is carefully designed for optimum performance as well as aesthetics. The cascading, ramp-style ember burner brings to life the warm yellow flame patterns and deep smoldering glow. The control and gas train assembly is completely hidden from view to maximize the realistic scene. Then the system is hand finished in multiple combinations of natural wood tones and smoky, charred details for a true to life wood fire presentation unlike any gas log set before it or since.

While Certification standards prevent vented gas logs from being classified as "heaters", FMI's patented burner technology is a clear departure from any other vented gas log. The log stack is integrated into the ceramic burner as a single arrangement which is designed to produce an intense red glow that commonly generates overall radiant heating efficiencies of 56% in a conventional masonry woodburning fireplace, and the cleanest burn in the industry.

FMI goes above and beyond when it comes to safety of our products. In addition to industry-leading, clean flame combustion technology, the Avalon includes an electronic ignition and safety gas control system with multi-function remote. The control and gas train are 100% factory assembled and tested.

The Avalon's unitized, fully assembled design also makes installation a breeze! Just complete the gas connection using the shut-off valve and stainless flex connector provided. Like all FMI logs, the Arcadia doesn't require any break in or "burn off" period, so you can enjoy your new heater instantly.

Unitized log arrangement is intricately detailed.

Standard Features

- Realistic ceramic fiber log stack is unitized to assure safety, performance, and ease of installation.
- Decorative 5 pc. log scrap kit, glowing ember chips and lava floor cinders complete the custom hearth presentation.
- Single flame, high efficiency ceramic ramp burner for realistic look and feel, creates active, colorful flame presentation and plenty of glowing coals.
- Hand-held, multi function radio frequency remote control
- Fully assembled electronic gas train assembly; concealed to maximize realism, includes fully automatic electronic ignition.
- Design certified decorative gas appliance (ANSI Z21.60.A-2000).

The newly re-designed electronic module is easily accessible, and concealed with a unique, decorative hearth media log.
